GEO LUX

Geolux Truck Easy is a battery-powered device.

Each projector emits two laser beams:

- first one is used to measure toe
- second one is used to set the steering wheel position for straight ahead driving and the rear axle.

Wheel camber angle measurement is possible using a dedicated app running on *Android*.

Using the GeoLux Truck Easy device, we can measure in one operation:

- half toe
- total toe
- wheel camber angles
- set the steering wheel position for straight-ahead driving.

The standard equipment of the basic set includes swivel discs, wall hangings, and a steering lock.
